

INCUE

Let's modernize ICRA together.

INCUE is a holistic solution that allows Infection Preventionists, Facilities, Designers, and Construction Teams to increase patient safety while reducing risk during construction and maintenance activities.

HOW WE DO IT

Our system uses sensors for real-time alerting via app, email, or text message to address quality issues before adverse patient events occur

BRIDGING THE REACTIONARY GAP BETWEEN CONSTRUCTION AND PATIENT SAFETY.

INCUE is a breakthrough system that enables all stakeholders to impact Patient Quality and Safety to drive better outcomes. We built INCUE from the ground up, based on decades of ICRA best practice implementations.

WHY USE INCUE?

33.7 million people are hospitalized every year in the US. Of that, 1.7 million contract Hospital Acquired Infections (HAI's). 100,000 of those HAI's are attributed to construction and maintenance activities, where it is estimated that between 5,000 and 10,000 HAI's result in death.

With INCUE, everyone involved with patient safety can now collaborate, in-real time, to curb those numbers by mitigating hazardous situations proactively before adverse patient events occur.

In an office or on a job site? INCUE has you covered with real-time visibility into ICRA containment and other critical areas. INCUE supports Web Browsers, Android, or iOS.

Our Capabilities

- ✓ Real-Time Data Collection and Alerts via app, email, or text
- ✓ Collaboration and Automatic Documentation to Support Audits
- ✓ Accountability for ICRA Safety Protocols and Best Practices
- ✓ Continuous Air-Pressure, Air-Quality, Temperature & Humidity Monitoring
